DS3231 high precision I2C RTC library for Arduino

1.0.0

Contents

Chapter 1

DS3231 high precision I2C RTC library for Arduino

This is an advanced DS3231 high precision RTC library for Arduino.

Features

- Read time

- Set time

- Read date and time

- Set date and time

- Read Unix Epoch UTC 32-bit timestamp

- Read temperature (0.25 degree resolution)

- Alarm 1 (second/minute/hour/day/date match)

- Alarm 2 (minute/hour/day/date match)

- Polling and Alarm `INT/SQW` interrupt pin

- Control `32kHz` out signal (enable/disable)

- Control `SQW` signal (disable/1/1024/4096/8192Hz)

- Configure aging offset

- Serial terminal interface

- Full RTC register access

- Easy debug functionality

- Basic and advanced examples

- Set date/time over serial with Python script

- Low RAM footprint:
    - `sizeof(DS3231)`: 1 Byte RTC object.
    - `sizeof(DS3231_DateTime)`: 8 Bytes date/time object.

- Full Doxygen documentation

Hardware

Any Arduino hardware with a TWI interface and `Wire.h` support.

Pins

DS3231	Arduino UNO / Nano / Micro / Pro Micro	Mega2560	Leonardo	WeMos D1 & R2 / Node MCU
VCC	5V	5V	5V	3V3
GND	GND	GND	GND	GND
SDA	A4	D20	D2	D2 (GPIO4)
CLK	A5	D21	D3	D1 (GPIO5)
SQW	D2 (INT0)	D2 (INT4)	D7 (INT6)	Any except GPIO16

Examples

Arduino IDE | Examples | Erriez DS3231 RTC:

- `AgingOffset` Aging offset programming.

- `AlarmInterrupt` Alarm with interrupts.

- `AlarmPolling` Alarm polled.

- `GettingStarted` Getting started example which contains most date/time/temperature features.

- `Minimum` Minimum example to read time.

- `PrintDiagnostics` Print diagnostics and registers.

- `ReadTimeInterrupt` Read time with 1Hz SQW interrupt. (Highly recommended)

- `ReadTimePolled` Read time polled.

- `SetDateTime` Set date time. (Must be started first)

- `Temperature` Temperature.

- `Terminal` Advanced terminal interface.

Documentation

- `Doxygen online HTML`

- `Doxygen PDF`

- `DS3231 datasheet`

Usage

Initialization

```c++
#include <Wire.h>
#include <DS3231.h>

// Create DS3231 RTC object
static DS3231 rtc;

void setup()
{
    // Initialize TWI with a 100kHz (default) or 400kHz clock
    Wire.begin();
    Wire.setClock(400000);

    // Initialize RTC
    while (rtc.begin()) {
        // Error: Could not detect DS3231 RTC, retry after some time
        delay(3000);
    }
}
```

Check oscillator status at startup

```c++
// Check oscillator status
if (rtc.isOscillatorStopped()) {
    // Error: DS3231 RTC oscillator stopped. Date/time cannot be trusted.
    // Set new date/time before reading date/time.
    while (1) {
        ;
    }
}
```

Set time

```c++
// Write time to RTC
if (rtc.setTime(12, 0, 0)) {
    // Error: Write time failed
}
```

Get time

```c++
uint8_t hour;
uint8_t minute;
uint8_t second;

// Read time from RTC
if (rtc.getTime(&hour, &minute, &second)) {
    // Error: Read time failed
}
```

Set date time

```c++
// Create and initialize date time object
static DS3231_DateTime dt = {
    .second = 0,
    .minute = 36,
    .hour = 21,
    .dayWeek = 7, // 1 = Monday
    .dayMonth = 29,
    .month = 7,
    .year = 2018
};

// Set new RTC date/time
rtc.setDateTime(&dt);
```

Get date time

```c++
{c++}
DS3231_DateTime dt;

// Read RTC date and time from RTC
if (rtc.getDateTime(&dt)) {
    // Error: Read date time failed
}
```

Get Epoch Unix UTC time

```c++
{c++}
uint32_t epoch;

// Read date/time from RTC
if (rtc.getDateTime(&dt)) {
    // Error: Read date/time failed
    return;
}

// Convert date/time to 32-bit epoch time
epoch = rtc.getEpochTime(&dt));
```

Get temperature

```c++
{c++}
int8_t temperature;
uint8_t fraction;

// Force temperature conversion
// Without this call, it takes 64 seconds before the temperature is updated.
rtc.startTemperatureConversion();

// Read temperature
rtc.getTemperature(&temperature, &fraction);

// Print temperature. The output below is for example: 28.25C
Serial.print(temperature);
Serial.print(F("."));
Serial.print(fraction);
Serial.println(F("C"));
```

Program Alarm 1

Note: Alarm 1 and Alarm 2 have different behavior. Please refer to the documentation which `Alarm1Type` and `Alarm2Type` are supported. Some examples:

```c++
{c++}
// Generate alarm 1 every second
rtc.setAlarm1(Alarm1EverySecond, 0, 0, 0, 0);

// Generate alarm 1 every minute and second match
rtc.setAlarm1(Alarm1EverySecond, 0, 0, 45, 30);

// Generate alarm 1 every day, hour, minute and second match
rtc.setAlarm1(Alarm1MatchDay,
            1,  // Alarm day match (1 = Monday)
            12, // Alarm hour match
            45, // Alarm minute match
            30  // Alarm second match
);
```

Program Alarm 2

```c++
{c++}
// Generate alarm 2 every minute
rtc.setAlarm2(Alarm2EveryMinute, 0, 0, 0);

// Generate alarm 2 every hour, minute match
rtc.setAlarm2(Alarm2MatchHours, 0, 23, 59);

// Generate alarm 2 every date, hour, minute match
rtc.setAlarm2(Alarm2MatchDate, 28, 7, 0);
```

Alarm polling

Note: The `INT` pin changes to low when an Alarm 1 or Alarm 2 match occurs and and the interrupt is enabled. The pin remains low until both alarm flags are cleared by the application.

```c++
{c++}
// Poll alarm 1 flag
if (rtc.getAlarmFlag(Alarm1)) {
    // Handle Alarm 1

    // Clear alarm 1 flag
    rtc.clearAlarmFlag(Alarm1);
}

// Poll alarm 2 flag
if (rtc.getAlarmFlag(Alarm2)) {
    // Handle Alarm 2

    // Clear alarm 2 flag
    rtc.clearAlarmFlag(Alarm2);
}
```

Alarm interrupt

Note: Enabling interrupt will disable the `SQW` output signal.

```c++
{c++}
// Uno, Nano, Mini, other 328-based: pin D2 (INT0) or D3 (INT1)
#define INT_PIN     2

static void alarmHandler()
{
    // Set global interrupt flag
    alarmInterrupt = true;
}

void setup()
{
    ...

    // Attach to INT0 interrupt falling edge
    pinMode(INT_PIN, INPUT_PULLUP);
    attachInterrupt(digitalPinToInterrupt(INT_PIN), alarmHandler, FALLING);

    // Enable Alarm 1 and 2 interrupts
    rtc.alarmInterruptEnable(Alarm1, true);
    rtc.alarmInterruptEnable(Alarm2, true);
}

void loop()
{
    // Check global alarm interrupt flag
    if (alarmInterrupt) {
        if (rtc.getAlarmFlag(Alarm1)) {
            // Handle alarm 1

            // Clear alarm 1 interrupt
            rtc.clearAlarmFlag(Alarm1);
        }

        if (rtc.getAlarmFlag(Alarm2)) {
            // Handle alarm 2

            // Clear alarm 2 interrupt
            rtc.clearAlarmFlag(Alarm2);
        }
    }
}
```

32kHz clock out

Enable or disable `32kHz` output pin.

```c++
rtc.outputClockPinEnable(true);     // Enable
rtc.outputClockPinEnable(false);    // Disable
```

Square Wave Out (SQW)

Note: Enabling `SQW` pin will disable the alarm `INT` signal.

```c++
rtc.setSquareWave(SquareWaveDisable);   // Disable
rtc.setSquareWave(SquareWave1Hz);       // 1Hz
rtc.setSquareWave(SquareWave1024Hz);    // 1024Hz
rtc.setSquareWave(SquareWave4096Hz);    // 4096Hz
rtc.setSquareWave(SquareWave8192Hz);    // 8192Hz
```

Library dependencies

- `Wire.h`

- `Terminal.ino` requires `ErriezSerialTerminal` library.

Library installation

Please refer to the `Wiki` page.

```
Public Member Functions

- bool begin ()

    Initialize and detect DS3231 RTC.
- void oscillatorEnable (bool enable)

    Enable or disable oscillator when running on V-BAT.
- bool isOscillatorStopped ()

    Read RTC halt status.
- void clearOscillatorStopFlag ()

    Clear Oscillator Stop Flag (OSF) in status register.
- void setDateTime (DS3231_DateTime ∗dateTime)

    Write date and time to RTC.
- bool getDateTime (DS3231_DateTime ∗dateTime)

    Read date and time from RTC.
- void setTime (uint8_t hour, uint8_t minute, uint8_t second)

    Write time to RTC.
- bool getTime (uint8_t ∗hour, uint8_t ∗minute, uint8_t ∗second)

    Read time from RTC.
- uint32_t getEpochTime (DS3231_DateTime ∗dateTime)

    Get Unix Epoch 32-bit timestamp in current timezone.

- void setAlarm1 (Alarm1Type alarmType, uint8_t dayDate, uint8_t hours, uint8_t minutes, uint8_t seconds)

    Set and enable Alarm 1.

- void setAlarm2 (Alarm2Type alarmType, uint8_t dayDate, uint8_t hours, uint8_t minutes)

    Set and enable Alarm.

- void alarmInterruptEnable (AlarmId alarmId, bool enable)

    Enable or disable Alarm 1 or 2 interrupt.

- bool getAlarmFlag (AlarmId alarmId)

    Get Alarm 1 or 2 flag.

- void clearAlarmFlag (AlarmId alarmId)

    Clear alarm flag.

- void setSquareWave (SquareWave squareWave)

    Configure SQW (Square Wave) output pin.

- void outputClockPinEnable (bool enable)

    Enable or disable 32kHz output clock pin.

- void setAgingOffset (int8_t val)

    Set aging offset register.

- int8_t getAgingOffset ()

    Get aging offset register.

- void startTemperatureConversion ()

    Start temperature conversion.

- void getTemperature (int8_t ∗temperature, uint8_t ∗fraction)

    Read temperature.

- uint8_t bcdToDec (uint8_t bcd)

    BCD to decimal conversion.

- uint8_t decToBcd (uint8_t dec)

    Decimal to BCD conversion.

- uint8_t readControlRegister ()

    Read control register.

- void writeControlRegister (uint8_t value)

    Write control register.

- uint8_t readStatusRegister ()

    Read status register.

- void writeStatusRegister (uint8_t value)

    Write status register.

- uint8_t readRegister (uint8_t reg)

    Read register.

- void writeRegister (uint8_t reg, uint8_t value)

    Write to RTC register.

- void readBuffer (uint8_t reg, void ∗buffer, uint8_t len)

    Read buffer from RTC.

- void writeBuffer (uint8_t reg, void ∗buffer, uint8_t len)

    Write buffer to RTC.

5.1.1 Detailed Description

DS3231 RTC base class.

Definition at line 160 of file DS3231.h.

5.1.2 Member Function Documentation

5.1.2.1 alarmInterruptEnable()

```
void DS3231::alarmInterruptEnable (
          AlarmId alarmId,
          bool enable )
```

Enable or disable Alarm 1 or 2 interrupt.

Enabling the alarm interrupt will disable the Square Wave output on the INT/SQW pin. The INT pin remains high until an alarm match occurs.

Parameters

alarm↩ Id	Alarm1 or Alarm2 enum.
enable	true: Enable alarm interrupt. false: Disable alarm interrupt.

Definition at line 421 of file DS3231.cpp.

5.1.2.2 bcdToDec()

```
uint8_t DS3231::bcdToDec (
          uint8_t bcd )
```

BCD to decimal conversion.

Parameters

bcd	BCD encoded value.

Returns

Decimal value.

Definition at line 662 of file DS3231.cpp.

5.1.2.3 begin()

```
bool DS3231::begin ( )
```

Initialize and detect DS3231 RTC.

Call this function from setup().

Return values

Success	RTC detected.
false	RTC not detected.
true	Invalid status register or RTC not detected.

Definition at line 54 of file DS3231.cpp.

5.1.2.4 clearAlarmFlag()

```
void DS3231::clearAlarmFlag (
            AlarmId alarmId )
```

Clear alarm flag.

This function should be called when the alarm flag has been handled in polling and interrupt mode. The INT pin changes to high when both alarm flags are cleared and alarm interrupts are enabled.

Parameters

alarm↩ Id	Alarm1 or Alarm2 enum.

Return values

Success	
Failure	Incorrect alarm ID.

Definition at line 482 of file DS3231.cpp.

5.1.2.5 decToBcd()

```
uint8_t DS3231::decToBcd (
            uint8_t dec )
```

Decimal to BCD conversion.

Parameters

dec	Decimal value.

Returns

BCD encoded value.

Definition at line 674 of file DS3231.cpp.

5.1.2.6 getAgingOffset()

```
int8_t DS3231::getAgingOffset ( )
```

Get aging offset register.

The aging offset register capacitance value is added or subtracted from the capacitance value that the device calculates for each temperature compensation.

Returns

> val Aging offset value.

Definition at line 587 of file DS3231.cpp.

5.1.2.7 getAlarmFlag()

```
bool DS3231::getAlarmFlag (
            AlarmId alarmId )
```

Get Alarm 1 or 2 flag.

Call this function to retrieve the alarm status flag. This function can be used in polling as well as with interrupts enabled.

The INT pin changes to low when an Alarm 1 or Alarm 2 match occurs and the interrupt is enabled. The pin remains low until both alarm flags are cleared by the application.

Parameters

alarm↩ Id	Alarm1 or Alarm2 enum.

Return values

true	Alarm interrupt flag set.
false	Alarm interrupt flag cleared.

Definition at line 460 of file DS3231.cpp.

5.1.2.8 getDateTime()

```
bool DS3231::getDateTime (
            DS3231_DateTime * dateTime )
```

Read date and time from RTC.

Read all RTC registers at once to prevent a time/date register change in the middle of the register read operation.

Parameters

dateTime	Date and time structure.

Return values

false	Success
true	An invalid date/time format was read from the RTC.

Definition at line 180 of file DS3231.cpp.

5.1.2.9 getEpochTime()

```
uint32_t DS3231::getEpochTime (
            DS3231_DateTime * dateTime )
```

Get Unix Epoch 32-bit timestamp in current timezone.

The DS3231 RTC year range is valid between years 2000...2100. The time is in UTC.

Return values

epoch	32-bit unsigned Unix Epoch time

Definition at line 288 of file DS3231.cpp.

5.1.2.10 getTemperature()

```
void DS3231::getTemperature (
            int8_t * temperature,
            uint8_t * fraction )
```

Read temperature.

Parameters

temperature	8-bit signed temperature in degree Celsius.
fraction	Temperature fraction in steps of 0.25 degree Celsius. The returned value is a decimal value to prevent floating point usage. The application should divided the fraction by 100. **Generated by Doxygen**

Definition at line 634 of file DS3231.cpp.

5.1.2.11 getTime()

```
bool DS3231::getTime (
            uint8_t * hour,
            uint8_t * minute,
            uint8_t * second )
```

Read time from RTC.

Read hour, minute and second registers from RTC.

Parameters

hour	Hours 0..23.
minute	Minutes 0..59.
second	Seconds 0..59.

Return values

false	Success
true	Invalid second, minute or hour read from RTC. The time is set to zero.

Definition at line 250 of file DS3231.cpp.

5.1.2.12 isOscillatorStopped()

```
bool DS3231::isOscillatorStopped ( )
```

Read RTC halt status.

The application is responsible for checking the Oscillator Stop Flag (OSF) before reading date/time date. This function may be used to judge the validity of the date/time registers.

Return values

true	RTC oscillator was stopped: The date/time data is invalid. The application should synchronize and program a new date/time.
false	RTC oscillator is running.

Definition at line 103 of file DS3231.cpp.

5.1.2.13   oscillatorEnable()

```
void DS3231::oscillatorEnable (
            bool enable )
```

Enable or disable oscillator when running on V-BAT.

Parameters

enable	true: Enable RTC clock when running on V-BAT.
	false: Stop RTC clock when running on V-BAT. Oscillator Stop Flag (OSF) bit will be set in status register which can be read on next power-on.

Definition at line 72 of file DS3231.cpp.

5.1.2.14   outputClockPinEnable()

```
void DS3231::outputClockPinEnable (
            bool enable )
```

Enable or disable 32kHz output clock pin.

Parameters

enable	true: Enable 32kHz output clock pin.
	false: Disable 32kHz output clock pin.

Definition at line 532 of file DS3231.cpp.

5.1.2.15   readBuffer()

```
void DS3231::readBuffer (
            uint8_t reg,
            void * buffer,
            uint8_t len )
```

Read buffer from RTC.

Parameters

reg	RTC register number 0x00..0x12.
buffer	Buffer.
len	Buffer length. Reading is only allowed within valid RTC registers.

Definition at line 781 of file DS3231.cpp.

5.1.2.16 readControlRegister()

```
uint8_t DS3231::readControlRegister ( )
```

Read control register.

Returns

8-bit unsigned register value

Definition at line 684 of file DS3231.cpp.

5.1.2.17 readRegister()

```
uint8_t DS3231::readRegister (
            uint8_t reg )
```

Read register.

Please refer to the RTC datasheet.

Parameters

reg	RTC register number 0x00..0x12.

Returns

value 8-bit unsigned register value.

Definition at line 725 of file DS3231.cpp.

5.1.2.18 readStatusRegister()

```
uint8_t DS3231::readStatusRegister ( )
```

Read status register.

Returns

8-bit unsigned register value

Definition at line 702 of file DS3231.cpp.

5.1.2.19 setAgingOffset()

```
void DS3231::setAgingOffset (
            int8_t val )
```

Set aging offset register.

The aging offset register capacitance value is added or subtracted from the capacitance value that the device calculates for each temperature compensation.

Parameters

val	Aging offset value -127..127, 0.1ppm per LSB (Factory default value: 0). Negative values increases the RTC oscillator frequency.

Definition at line 559 of file DS3231.cpp.

5.1.2.20 setAlarm1()

```
void DS3231::setAlarm1 (
            Alarm1Type alarmType,
            uint8_t dayDate,
            uint8_t hours,
            uint8_t minutes,
            uint8_t seconds )
```

Set and enable Alarm 1.

Alarm 1 contains several alarm modes which can be configured with the alarmType parameter. Unused matches can be set to zero. The alarm interrupt must be enabled after setting the alarm, followed by clearing the alarm interrupt flag.

Parameters

alarmType	Alarm 1 types: Alarm1EverySecond Alarm1MatchSeconds Alarm1MatchMinutes Alarm1MatchHours Alarm1MatchDay Alarm1MatchDate
dayDate	Alarm match day of the week or day of the month. This depends on alarmType.
hours	Alarm match hours.
minutes	Alarm match minutes.
seconds	Alarm match seconds.

Definition at line 343 of file DS3231.cpp.

5.1.2.21 setAlarm2()

```
void DS3231::setAlarm2 (
            Alarm2Type alarmType,
            uint8_t dayDate,
            uint8_t hours,
            uint8_t minutes )
```

Set and enable Alarm.

Alarm 2 contains different alarm modes which can be configured with the alarmType parameter. Unused matches can be set to zero. The alarm interrupt must be enabled after setting the alarm, followed by clearing the alarm interrupt flag.

Parameters

alarmType	Alarm 2 types:
	Alarm2EveryMinute
	Alarm2MatchMinutes
	Alarm2MatchHours
	Alarm2MatchDay
	Alarm2MatchDate
dayDate	Alarm match day of the week or day of the month. This depends on alarmType.
hours	Alarm match hours.
minutes	Alarm match minutes.

Definition at line 388 of file DS3231.cpp.

5.1.2.22 setDateTime()

```
void DS3231::setDateTime (
            DS3231_DateTime * dateTime )
```

Write date and time to RTC.

Write all RTC registers at once to prevent a time/date register change in the middle of the register write operation. This function enables the oscillator and clear the Oscillator Stop Flag (OSF) in the status register.

Parameters

dateTime	Date time structure. Providing invalid date/time data may result in unpredictable behavior.

Definition at line 145 of file DS3231.cpp.

5.1.2.23 setSquareWave()

```
void DS3231::setSquareWave (
            SquareWave squareWave )
```

Configure SQW (Square Wave) output pin.

This will disable or initialize the SQW clock pin. The alarm interrupt INT pin will be disabled.

Parameters

squareWave	SquareWave configuration: Disable: SquareWaveDisable 1Hz: SquareWave1Hz 1024Hz: SquareWave1024Hz 4096Hz: SquareWave4096Hz 8192Hz: SquareWave8192Hz

Return values

Success	
Failure	Incorrect squareWave.

Definition at line 513 of file DS3231.cpp.

5.1.2.24 setTime()

```
void DS3231::setTime (
            uint8_t hour,
            uint8_t minute,
            uint8_t second )
```

Write time to RTC.

Read all date/time register from RTC, update time registers and write all date/time registers to the RTC with one write operation.

Parameters

hour	Hours 0..23.
minute	Minutes 0..59.
second	Seconds 0..59.

Definition at line 222 of file DS3231.cpp.

5.1.2.25 startTemperatureConversion()

```
void DS3231::startTemperatureConversion ( )
```

Start temperature conversion.

Starting a conversion is only needed when the application requires temperature reads within 64 seconds, or changing the aging offset register.

Definition at line 610 of file DS3231.cpp.

5.1.2.26 writeBuffer()

```
void DS3231::writeBuffer (
            uint8_t reg,
            void * buffer,
            uint8_t len )
```

Write buffer to RTC.

Please refer to the RTC datasheet.

Parameters

reg	RTC register number 0x00..0x12.
buffer	Buffer.
len	Buffer length. Writing is only allowed within valid RTC registers.

Definition at line 761 of file DS3231.cpp.

5.1.2.27 writeControlRegister()

```
void DS3231::writeControlRegister (
            uint8_t value )
```

Write control register.

Parameters

value	8-bit unsigned register value

Definition at line 693 of file DS3231.cpp.

5.1.2.28 writeRegister()

```
void DS3231::writeRegister (
            uint8_t reg,
            uint8_t value )
```

Write to RTC register.

Please refer to the RTC datasheet.

Parameters

reg	RTC register number 0x00..0x12.
value	8-bit unsigned register value.

Definition at line 744 of file DS3231.cpp.

5.1.2.29 writeStatusRegister()

```
void DS3231::writeStatusRegister (
            uint8_t value )
```

Write status register.

Parameters

value	8-bit unsigned register value

Definition at line 711 of file DS3231.cpp.

The documentation for this class was generated from the following files:

- DS3231.h
- DS3231.cpp

5.2 DS3231_DateTime_s Struct Reference

Date time structure.

```
#include <DS3231.h>
```

Public Attributes

- uint8_t second

  Second 0..59.
- uint8_t minute

  Minute 0..59.
- uint8_t hour

  Hour 0..23.
- uint8_t dayWeek

  Day of the week (1 = Monday)
- uint8_t dayMonth

  Day of the month 1..31.
- uint8_t month

  Month 1..12.
- uint16_t year

  Year 2000..2099.

5.2.1 Detailed Description

Date time structure.

Definition at line 102 of file DS3231.h.

The documentation for this struct was generated from the following file:
- DS3231.h

5.3 DS3231Debug Class Reference

DS3231 RTC debug class.

```
#include <DS3231_debug.h>
```

Inheritance diagram for DS3231Debug:

```
┌─────────────────┐
│     DS3231      │
└─────────────────┘
         ▲
┌─────────────────┐
│   DS3231Debug   │
└─────────────────┘
```

Public Member Functions

- virtual void dumpRegisters (Stream ∗ser, bool printBitfields=true)

    Dump all registers to serial port.
- virtual void printRegister (Stream ∗ser, uint8_t reg, bool printBitfields=true)

    Print register and value.
- virtual void printRegisterBitfields (Stream ∗ser, uint8_t reg, uint8_t regVal)

    Print register bitfields.
- virtual void printDiagnostics (Stream ∗ser)

    Print diagnostics.

5.3.1 Detailed Description

DS3231 RTC debug class.

The output will be redirected to a user defined serial port. This class can be used by advanced developers to print internal RTC registers and diagnostics. Keep in mind that all strings used in this class are flash consuming.

Definition at line 47 of file DS3231_debug.h.

5.3.2 Member Function Documentation

5.3.2.1 dumpRegisters()

```
void DS3231Debug::dumpRegisters (
            Stream * ser,
            bool printBitfields = true )  [virtual]
```

Dump all registers to serial port.

Parameters

ser	Serial port.
printBitfields	true: Print register bitfields.

Definition at line 75 of file DS3231_debug.cpp.

5.3.2.2 printDiagnostics()

```
void DS3231Debug::printDiagnostics (
            Stream * ser )  [virtual]
```

Print diagnostics.

Parameters

ser	Serial port.

Definition at line 289 of file DS3231_debug.cpp.

5.3.2.3 printRegister()

```
void DS3231Debug::printRegister (
            Stream * ser,
            uint8_t reg,
            bool printBitfields = true )  [virtual]
```

Print register and value.

Parameters

ser	Serial port.
reg	Register number.
printBitfields	true: Print register bitfields.

Definition at line 92 of file DS3231_debug.cpp.

5.3.2.4 printRegisterBitfields()

```
void DS3231Debug::printRegisterBitfields (
            Stream * ser,
```

```
        uint8_t reg,
        uint8_t regVal ) [virtual]
```

Print register bitfields.

Parameters

ser	Serial port.
reg	Register number.
regVal	Register value.

Definition at line 119 of file DS3231_debug.cpp.

The documentation for this class was generated from the following files:

- DS3231_debug.h
- DS3231_debug.cpp

Chapter 6

File Documentation

6.1 DS3231.cpp File Reference

DS3231 high precision RTC library for Arduino.

```
#include <pgmspace.h>
#include <Wire.h>
#include "DS3231.h"
```

Variables

- const uint8_t daysMonth [12] PROGMEM = {31, 28, 31, 30, 31, 30, 31, 31, 30, 31, 30, 31}
  Define number of days in a month once in flash.

6.1.1 Detailed Description

DS3231 high precision RTC library for Arduino.

Source: https://github.com/Erriez/ErriezDS3231

6.2 DS3231.h File Reference

DS3231 high precision RTC library for Arduino.

```
#include <stdint.h>
```

Classes

- struct DS3231_DateTime_s
  Date time structure.
- class DS3231
  DS3231 RTC base class.

Macros

- #define DS3231_REG_SECONDS 0x00

    DS3231 registers.
- #define DS3231_REG_MINUTES 0x01

    Minutes register.
- #define DS3231_REG_HOURS 0x02

    Hours register.
- #define DS3231_REG_DAY_WEEK 0x03

    Day of the week register.
- #define DS3231_REG_DAY_MONTH 0x04

    Day of the month register.
- #define DS3231_REG_MONTH 0x05

    Month register.
- #define DS3231_REG_YEAR 0x06

    Year register.
- #define DS3231_REG_ALARM1_SEC 0x07

    Alarm 1 seconds register.
- #define DS3231_REG_ALARM1_MIN 0x08

    Alarm 1 minutes register.
- #define DS3231_REG_ALARM1_HOUR 0x09

    Alarm 1 hour register.
- #define DS3231_REG_ALARM1_DD 0x0A

    Alarm 1 day/date register.
- #define DS3231_REG_ALARM2_MIN 0x0B

    Alarm 2 seconds register.
- #define DS3231_REG_ALARM2_HOUR 0x0C

    Alarm 2 hour register.
- #define DS3231_REG_ALARM2_DD 0x0D

    Alarm 2 day/date register.
- #define DS3231_REG_CONTROL 0x0E

    Control register.
- #define DS3231_REG_STATUS 0x0F

    Status register.
- #define DS3231_REG_AGING_OFFSET 0x10

    Aging offset register.
- #define DS3231_REG_TEMP_MSB 0x11

    Temperature MSB register.
- #define DS3231_REG_TEMP_LSB 0x12

    Temperature LSB register.
- #define DS3231_NUM_REGS 19

    DS3231 number of registers.
- #define DS3231_HOUR_12H_24H 6

    DS3231 register bit defines.
- #define DS3231_HOUR_AM_PM 5

    AM/PM.
- #define DS3231_MONTH_CENTURY 7

    Century.
- #define DS3231_CTRL_EOSC 7

    Enable oscillator.
- #define DS3231_CTRL_BBSQW 6

Battery-Backed Square-Wave Enable.

- #define DS3231_CTRL_CONV 5

  Start temperature conversion.

- #define DS3231_CTRL_RS2 4

  Square wave rate-select 2.

- #define DS3231_CTRL_RS1 3

  Square wave rate-select 1.

- #define DS3231_CTRL_INTCN 2

  Interrupt control.

- #define DS3231_CTRL_A2IE 1

  Alarm 2 interrupt enable.

- #define DS3231_CTRL_A1IE 0

  Alarm 1 interrupt enable.

- #define DS3231_STAT_OSF 7

  Oscillator Stop Flag.

- #define DS3231_STAT_EN32KHZ 3

  Enable 32kHz clock output.

- #define DS3231_STAT_BSY 2

  Temperature conversion busy flag.

- #define DS3231_STAT_A2F 1

  Alarm 2 status flag.

- #define DS3231_STAT_A1F 0

  Alarm 1 status flag.

- #define DS3231_A1M1 7

  Alarm 1 bit 7 seconds register.

- #define DS3231_A1M2 7

  Alarm 1 bit 7 minutes register.

- #define DS3231_A1M3 7

  Alarm 1 bit 7 hours register.

- #define DS3231_A1M4 7

  Alarm 1 bit 7 day/date register.

- #define DS3231_A2M2 7

  Alarm 2 bit 7 minutes register.

- #define DS3231_A2M3 7

  Alarm 2 bit 7 hours register.

- #define DS3231_A2M4 7

  Alarm 2 bit 7 day/date register.

- #define DS3231_DYDT 6

  Alarm 2 bit 6.

- #define DS3231_ADDR (0xD0 $\gg$ 1)

  DS3231 I2C 7-bit address.

- #define SECONDS_FROM_1970_TO_2000 946684800

  Number of seconds between year 1970 and 2000.

Typedefs

- typedef struct DS3231_DateTime_s DS3231_DateTime

  Date time structure.

Enumerations

- enum AlarmId { Alarm1 = 1, Alarm2 = 2 }

    Alarm ID.
- enum Alarm1Type {
  Alarm1EverySecond = 0x0F, Alarm1MatchSeconds = 0x0E, Alarm1MatchMinutes = 0x0C, Alarm1MatchHours = 0x08,
  Alarm1MatchDay = 0x10, Alarm1MatchDate = 0x00 }

    Alarm 1 types enum.
- enum Alarm2Type {
  Alarm2EveryMinute = 0x0E, Alarm2MatchMinutes = 0x0C, Alarm2MatchHours = 0x08, Alarm2MatchDay = 0x10,
  Alarm2MatchDate = 0x00 }

    Alarm 2 types enum.
- enum SquareWave {
  SquareWaveDisable = (1 << DS3231_CTRL_INTCN), SquareWave1Hz = ((0 << DS3231_CTRL_RS2) | (0 << DS3231_CTRL_RS1)), SquareWave1024Hz = ((0 << DS3231_CTRL_RS2) | (1 << DS3231_CTRL↩ _RS1)), SquareWave4096Hz = ((1 << DS3231_CTRL_RS2) | (0 << DS3231_CTRL_RS1)),
  SquareWave8192Hz = ((1 << DS3231_CTRL_RS2) | (1 << DS3231_CTRL_RS1)) }

    Squarewave enum.

6.2.1 Detailed Description

DS3231 high precision RTC library for Arduino.

Source: https://github.com/Erriez/ErriezDS3231

6.2.2 Macro Definition Documentation

6.2.2.1 DS3231_HOUR_12H_24H

```
#define DS3231_HOUR_12H_24H 6
```

DS3231 register bit defines.

12 or 24 hour mode

Definition at line 64 of file DS3231.h.

6.2.2.2 DS3231_NUM_REGS

```
#define DS3231_NUM_REGS 19
```

DS3231 number of registers.

19 RTC register: 0x00..0x12

Definition at line 61 of file DS3231.h.

6.2.2.3 DS3231_REG_SECONDS

```
#define DS3231_REG_SECONDS 0x00
```

DS3231 registers.

Seconds register

Definition at line 38 of file DS3231.h.

6.2.3 Enumeration Type Documentation

6.2.3.1 Alarm1Type

```
enum Alarm1Type
```

Alarm 1 types enum.

Enumerator

Alarm1EverySecond	Alarm once per second.
Alarm1MatchSeconds	Alarm when seconds match.
Alarm1MatchMinutes	Alarm when minutes and seconds match.
Alarm1MatchHours	Alarm when hours, minutes, and seconds match.
Alarm1MatchDay	Alarm when date, hours, minutes, and seconds match.
Alarm1MatchDate	Alarm when day, hours, minutes, and seconds match.

Definition at line 123 of file DS3231.h.

6.2.3.2 Alarm2Type

```
enum Alarm2Type
```

Alarm 2 types enum.

Enumerator

Alarm2EveryMinute	Alarm once per minute (00 seconds of every minute)
Alarm2MatchMinutes	Alarm when minutes match.
Alarm2MatchHours	Alarm when hours and minutes match.
Alarm2MatchDay	Alarm when date, hours, and minutes match.
Alarm2MatchDate	Alarm when day, hours, and minutes match.

Definition at line 136 of file DS3231.h.

6.2.3.3 AlarmId

`enum AlarmId`

Alarm ID.

Enumerator

Alarm1	Alarm ID 1.
Alarm2	Alarm ID 2.

Definition at line 115 of file DS3231.h.

6.2.3.4 SquareWave

`enum SquareWave`

Squarewave enum.

Enumerator

SquareWaveDisable	SQW disable.
SquareWave1Hz	SQW 1Hz.
SquareWave1024Hz	SQW 1024Hz.
SquareWave4096Hz	SQW 4096Hz.
SquareWave8192Hz	SQW 8192Hz.

Definition at line 148 of file DS3231.h.

6.3 DS3231_debug.cpp File Reference

DS3231 high precision RTC debug library for Arduino.

`#include "DS3231_debug.h"`

Variables

- const char reg_0x00 [ ] PROGMEM = "Seconds"

    Register names as string in flash.

6.3.1 Detailed Description

[DS3231](#) high precision RTC debug library for Arduino.

Source: https://github.com/Erriez/ErriezDS3231

6.3.2 Variable Documentation

6.3.2.1 PROGMEM

```
const char* const registerNames [] PROGMEM = "Seconds"
```

Register names as string in flash.

Array with all register names in flash.

Definition at line 37 of file DS3231_debug.cpp.

6.4 DS3231_debug.h File Reference

[DS3231](#) high precision RTC debug library for Arduino.

```
#include <Arduino.h>
#include "DS3231.h"
```

Classes

- class [DS3231Debug](#)

    [DS3231](#) RTC debug class.

6.4.1 Detailed Description

[DS3231](#) high precision RTC debug library for Arduino.
